

# TANZANIA WATER PREDICTION

---

# **Problem Statement: Predicting the Status of Water Pumps in Tanzania**

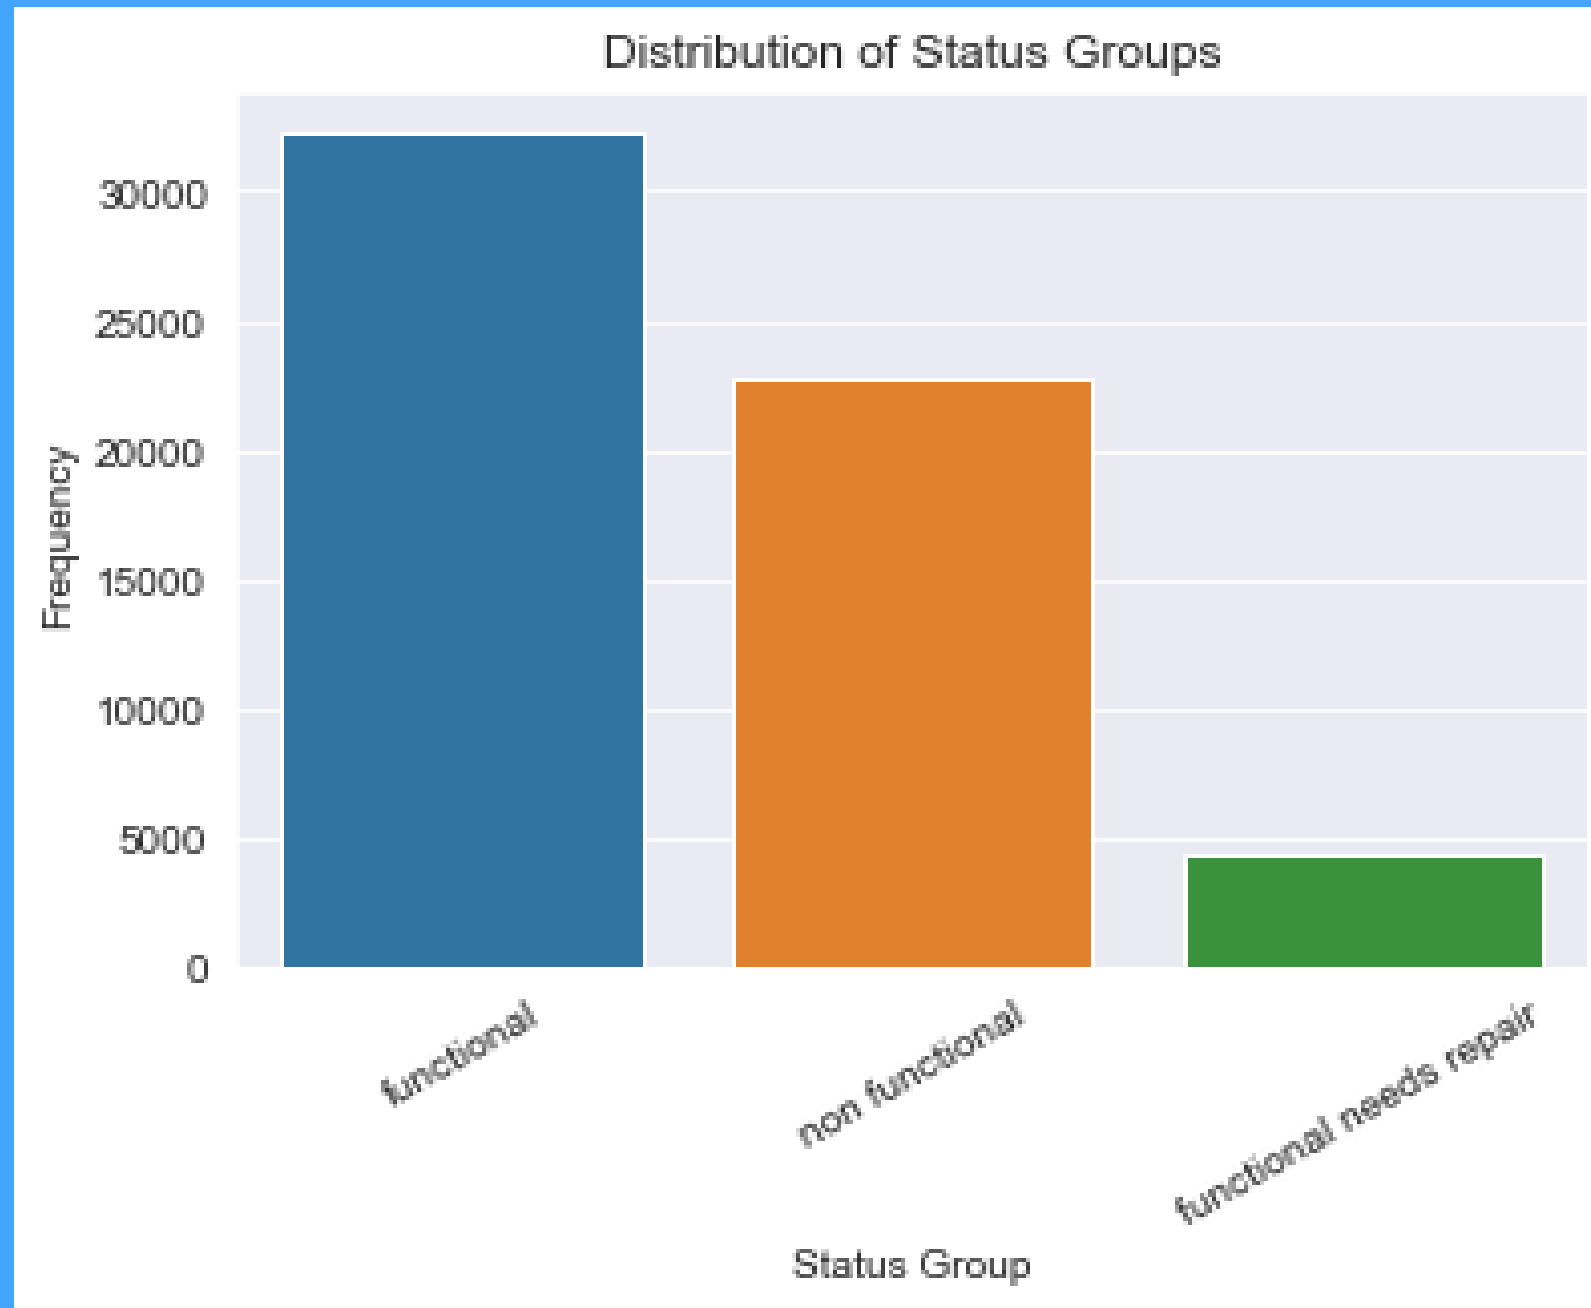

# 5900

The number of water pumps in Tanzania

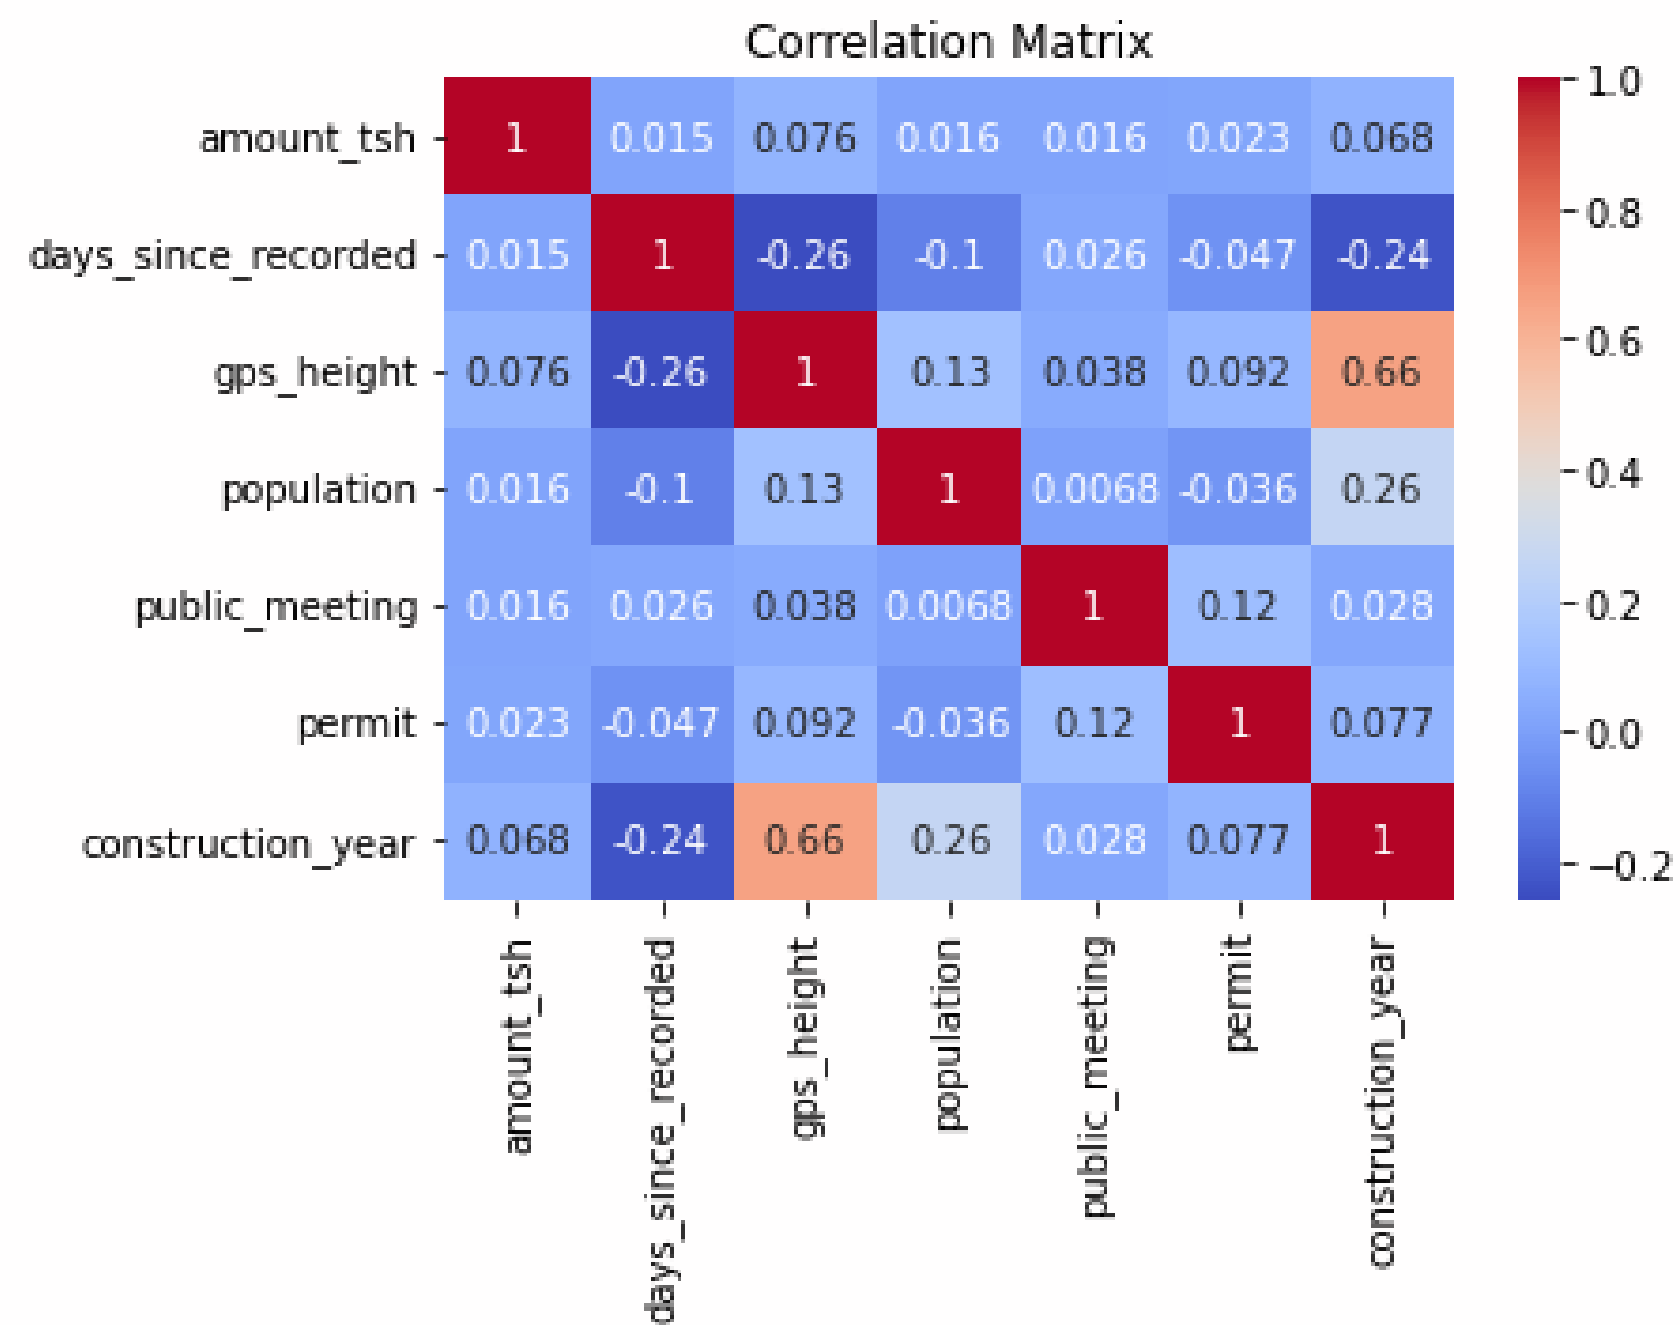

**54%** Functional pumps

**38%** Non-Functional pumps

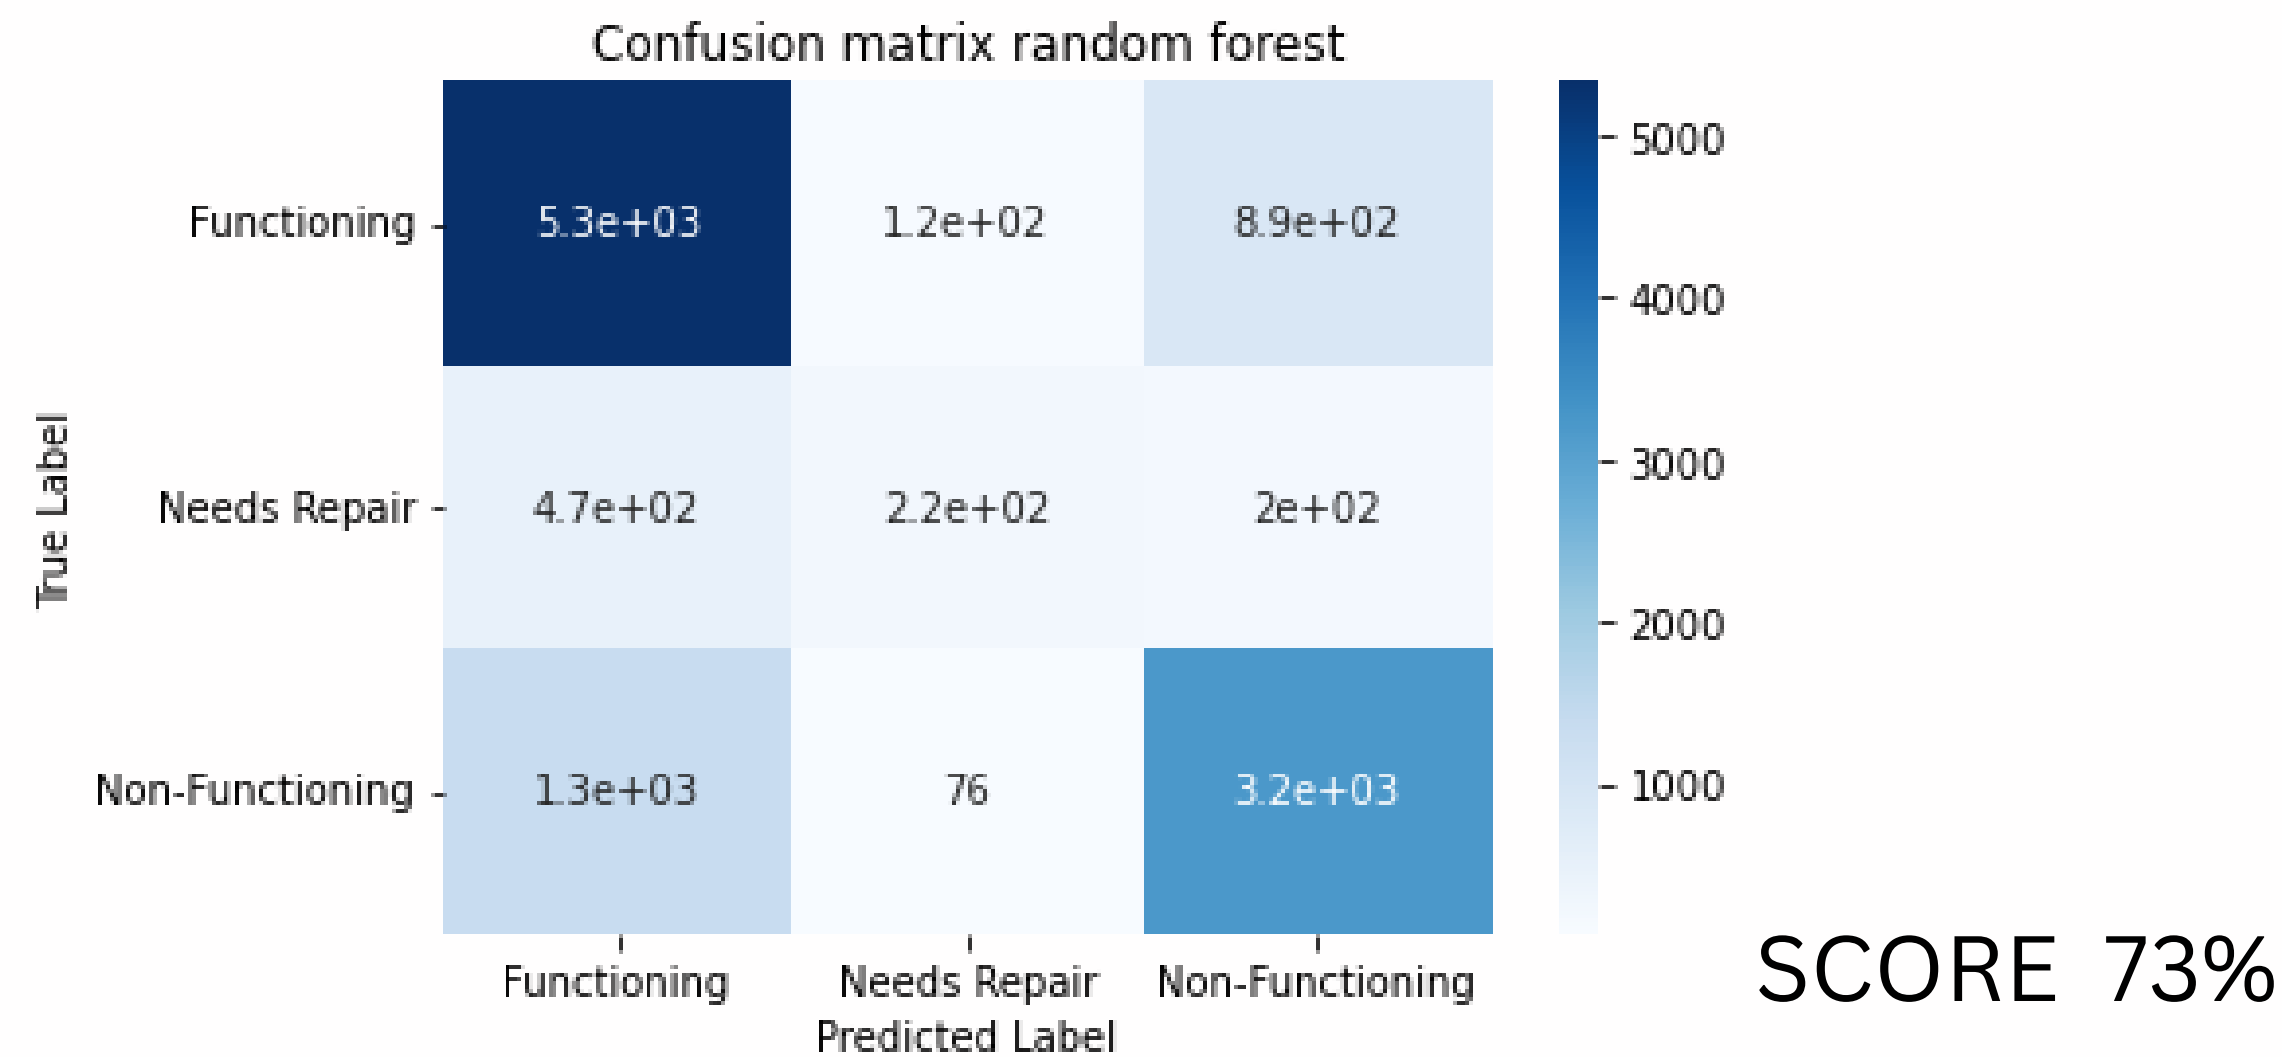

**7%** Needs repair

Some of the main features for prediction included in the **correlation matrix** **amount\_tsh** , **construction year**.

# MODEL evaluation.

This is a Random forest model predictor .

# RECOMENDATION

The [Random Forest algorithm](#) is well-suited to address the challenge of predicting which water pumps in Tanzania need to be repaired. It provides a high degree of accuracy and stability, as well as valuable insights into the variables that are driving repair needs. I would be happy to discuss this recommendation further and provide any additional information that may be necessary.
